RENEWED GRAIN CRIMPERS

Crimping technology is the most cost-effective alternative of producing high-quality and well-storable feed for animals.

Crimper is used to crush freshly harvested grain husk, which moisture is ca. 35%, to improve access to essential nutrients inside the grain and to accelerate the digestion process.

Estre is an experienced crimpers manufacturer and in cooperation with the Estonian University of Life Sciences we tested and improved our crimpers.

Are you small, medium or large farmer, you can find suitable crimper from our range.

Improvements:
higher productivity
new profile and surface on crimping rollers
more stainless steel surfaces
easily configurable regulator
advanced rollers configurator
convenient rollers controlling
all lubrication points in same place
new wear-resistant scrapers
easier 3-point hitching

They are still:
robust and reliable
with many extras
competitive prices
Made in EU
